

STRATFORD UTILITY CORPORATION POLICY

POLICY: Ultra Violet Lights	POLICY NO: 20
EFFECTIVE DATE: April 25, 2007	APPROVED BY: Stratford Utility Corporation
AMENDED April 15, 2009	

PURPOSE:

To provide residents who experience water quality problems in their on site wells, with monetary compensation towards the installation of Ultra Violet Disinfection Lights.

PROCESS FOR APPLICATION AND APPROVAL:

Residents who submit proof of poor water quality considered unfit for human consumption as outlined in the Canadian drinking water guidelines, by way of providing two consecutive water sample results showing levels of total coliform bacteria greater than 10 or any level of ecoli, within a one month period, (after remedial work has been completed on their well), will be deemed eligible for compensation from a fund set up to address such occurrences.

POLICY:

Upon receipt of proof of poor water quality as described above and, upon submission from the homeowner, copies of all invoices pertaining to the purchase and installation of a Ultra Violet disinfection system, The Stratford Utility Corporation will pay the registered owner of the property on which the affected well is located, the sum of five hundred (\$500.00) dollars in the form of cheque only. The money available for this contribution will be drawn from a water and sewer fund set up by the Town to address problems in areas where servicing is not yet available to the property owner.

EXCEPTIONS AND EXCLUSIONS:

The Stratford Utility will *not* pay invoices submitted for *any* used device or for *any* work performed by an unlicensed contractor. Invoicing must be marked "paid" and be issued from a registered trade contractor. Eligible applicants must submit proof of completed remedial work to their well as outlined by the Province of P.E.I. or as requested by the utility.
